5. Discussion also occurred concerning an alphabetical index to felt that such an the subject categories being developed. 25X1 index should be developed and made part of the content control scheme which will be presented to CODIB. As soon as possible members will develop the index. Part of this development will be a comparison of similar type indexes associated with existing systems such as the ISC, and with State, DIA, NSA and other agency subject category indexes. These comparisons should result in a selected list of terms in addition to those appearing in our scope note which are appropriate for our index. It was noted that the alphabetic index to the ISC runs more than 100 pages and involves thousands of terms; therefore, selectivity is the keyword. It was decided that the index terms and their assigned categories should be placed on 3 x 5 cards, the term in the upper left hand corner, category description top center, e.g., Political General, and the top right hand corner be reserved for the standard symbols representing the categories, when they have been developed.

6. The next meeting of the team will take up area aspects of content control as well as further deliberation on subject categories, identifiers and modifiers. It will be held at 0930 hours, 2 June 1965, Room 2E45 at CIA Headquarters.
